# NiceLabel

Local design and printing clients provide the accessibility and security that are expected in many business environments.

Workstation labeling activity is centrally logged and managed. NiceLabel Print Center is designed for environments that benefit from printing based on local workstation platforms. It provides many of the management benefits of a server-based system to the necessary business environments.

## CENTRALLY MANAGE ALL PRINTING CLIENTS

- Use both NiceWatch or NiceForm to control your printing process
- Concurrent licensing
- Advanced and user-friendly graphical designer
- Central maintenance through Enterprise Print Manager

## YOUR TIME, BUDGET, AND KNOWLEDGE ARE AS VALUABLE TO US AS THEY ARE TO YOU

Move beyond the limitations of purely localized and exclusively server-based systems. Combine the benefits of local printing stations with the control and management access of a server solution to achieve reliable printing and global access to logs and reports.

## GRAPHICAL DESIGNER

NiceLabel Print Center includes a graphical designer, which lets you make layout changes or create new labels quickly and efficiently.

## CLIENT-BASED PRINTING

Client-based printing lets you use NiceWatch and NiceForm to manage an effective printing operation. Broad management including licensing can be operated through the Enterprise Print Manager server application.

## GLOBAL MANAGEMENT

Enterprise Print Manager is a server application which bridges the gap between the printing stations and central control. It offers direct insight into the status and history of any printer from anywhere in the world.
